PREFACE.

In publishing this last Volume of the series of Anglo Oriya Dictionaries, the compiler claims the privilege of prefixing a few observations.

The work has been commenced and carried forward amidst many pressing engagements, which left him little leisure beyond what could be abstracted from the usual seasons of relaxation or repose. Nor has he had the advantage of any assistant but his pundit. When he first began the study of the language, in common with most others, he began to compile a Dictionary; but at the end of several years found it was nothing worth, and scattered it to the winds. The fact is, he felt that without better Native assistance than he had been hitherto able to procure, it was impossible to furnish any thing better than an imperfect Oriya version of a Bangáli Dictionary. He however began again by making long lists of words from Native works, and adding synonyms as he could obtain them. In this manner the basis of the two last Volumes was laid.

The words thus collected amount to double the number of those now presented to the public; but all which appeared likely to be of any real service, without unnecessarily enlarging the work, have been retained. After all, many of doubtful utility have been allowed to stand, and some, doubtless, of really useful Oriya words have not been collected. All that the compiler can say is, that he has done the best he could under the circumstances in which he was placed, not the best that he might have done with more leisure and greater facilities. He will feel thankful to students of the language for any additional words they may meet with, and for any improvements they may suggest in rendering those now issued; and such additions and suggestions shall be treasured up for an improved edition, should it ever be called for at his hands, or the hands of his successors.

The greatest difficulty experienced by the compiler is the ascertainment of the real application of Sanscrut and Bangáli words in Orissa. Frequently they are the same in all three languages, but not unfrequently they differ widely, and, in most cases, only some of the meanings current in the two former are applicable in the last. There remains much pruning and emendation to be effected in this department; but with the cultivation of the language many of the present discrepancies will vanish.

Those who may be disposed to censure the defects in an undertaking of this

kind would do well first to try their own hand in defining a few hundred words: let them consult their Dictionaries and their pundits, and amid the discordance and conflict of them all endeavour to select their renderings and definitions. Nothing can be more aggravating than the pertinacity with which different pundits insist upon their own definitions, where perhaps all are wrong.

When the writer undertook this work, he hoped to have little more to do than suggest any improvements he could offer to a work prepared by a Hindu gentleman at Pooree; but from reasons he need not here recapitulate, in this he was disappointed, and obliged to go on with the work from first to last himself. To Mr. Davis, formerly of Pooree, he is indebted for a compilation of Oriya words which he had made from various sources; from these a few terms, he had not himself met with, have been selected. He has also made constant use of Mendie's, and Morton's, and other Bangáli Dictionaries, and especially of Dr. Wilson's Sanscrit Dictionary. To Dr. Carey in this, as in most of his undertakings, he is under great obligations; and as he will probably find no more suitable opportunity, he begs once for all here to record his gratitude to, and esteem for, that noble-minded friend of India. Dr. Carey was the first European student of the Oriya language, and prepared, or caused to be prepared, the first works in Oriya. It is however evident that the Doctor knew comparatively little of the peculiarities which distinguish the Oriya from the Bangáli; and his pundit, though perhaps the best Oriya scholar of his day, allowed his translations to go forth with the most palpable neglect of those peculiarities.

The writer would have found it difficult to account for this neglect had we not employed in the Mission a pundit for many years, who pursued precisely the same course. It was obvious that there was a Bangáli air about our first publications which attached not to Native works; but our veneration for the Doctor, and the great reputation of his pundit, inclined us to think they could not have erred. The fact, however, is indisputable, and may teach all future students extreme caution in giving in to any opinions, which they cannot of themselves verify, however strongly expressed by their Native teachers.

While there are minor deductions which must be made from the works of the venerable Doctor, not only in Oriya but in other languages also, still he has laid his successors under lasting obligations; and however prejudice or ignorance may cavil, or even the direct use of his labours be superseded, the indirect use of them, and their extensive influence, can know no end.

It was at the particular injunction of the beloved Doctor that the compiler of these works prosecuted his labours. In his last lengthened conversation with him, after having by writing urged him to revise his Oriya translations, and furnish us with an Oriya Grammar, he replied, "No: I have done my share, and I now make it over to you." Thus much the writer feels compelled to

say; and if in the prosecution of his task he has been obliged to vary ought from the track of his venerable predecessor, he has always felt too well assured of the generous disinterestedness and ever-prevailing desire for usefulness of the Doctor to suppose, for a moment, that he would esteem it any honour that deference for his name or labours should be made the occasion of perpetuating a single error, or of suppressing even the slightest improvement.

This volume, it will be seen, has been so arranged as to embrace, in the most convenient space, the greatest amount of matter. With this view the parts of speech have been omitted, as in truth only strictly applicable to the English definitions, and those definitions have been given with all desirable brevity. Of the 20,000 words here presented, the majority are Sanscrut, or derivations from the Sanscrut; the next largest portion are the peculiar language of Orissa; and to these are added a number of Hindusthani words. This last class are generally distinguished by an Asterisk. While in classical Oriya composition these exotics may not be admitted, yet many of them have obtained such extensive currency, that no Dictionary of the vernacular language of the province can be complete without them: the difficulty lies in knowing where to limit their insertion.

If it be difficult to decide where to stop as it respects the insertion of Hindusthani terms, it is still more so as it respects the admission of Sanscrut. Just in the proportion that education advances in the province will larger accessions of Sanscrut words be made to the current language; and probably also in the same proportion most of the pure Oriya words will disappear from literary compositions, though it is not probable they will become obsolete as household terms. Many of these words are of such limited local application, that, in order to render any work intelligible throughout the province, words of Sanscrut origin must be generally substituted for them.

The obscene vulgarisms scattered throughout the work may seem to call for an apology. The compiler long hesitated about expunging them; and if the following reason does not plead sufficiently his justification for not doing so, he must submit to censure. It is too well known that the ordinary language of the people abounds with the filthiest expressions; hence children, and even adults who are acquiring the language, are apt to pick up and repeat these expressions without being aware of their gross indecency. The writer has moreover heard some of these expressions employed in the presence of European functionaries, who have not been aware of the insult offered to them.* It is chiefly with a

* Perhaps the writer may be allowed to suggest to the estimable authorities in the province whether something might not be done to suppress the insufferably filthy songs of the *Palkee-bearers*. It is a gross outrage upon the feelings of those they may carry, especially where there are ladies in company,) and who may be supposed to understand

view of putting such persons on their guard that these words have been retained as a specimen of many others of a similar character.

At the close of the volume will be found a list of such Official Terms as are not included in the body of the work, or which have acquired an Official application somewhat different from the meaning therein ascribed to them. A Scientific List of Materia Medica, &c. will also be found appended, both of which Lists, it is hoped, will be found useful.

The compiler's original intention was to furnish three distinct lists of words: the first embracing all the Sanscrut words current, or likely to become current in the province; the second the pure language of the land; and the third all exotic terms, whether of Asiatic or European origin. This he considers the only complete arrangement, and the present compilation may easily be rendered subservient to this design. To complete it, however, requires longer time and more extensive research than he has hitherto been able to afford. In the meantime life is fast wearing away; and he would deem it an error, while cherishing a plan he may not live to accomplish, to forego the opportunity of publishing what may prove a useful, though a confessedly imperfect work.

more or less of their language, to be condemned to travel with such indecencies vociferated in their ears. Nor is the offence against public morals unworthy of notice. So far as the writer can ascertain, this especial evil is far more gross in Orissa than elsewhere. Some official prohibition would doubtless do much towards an alleviation of the evil.
